SUBJECT INDEX

ANSI screen-film-processing sensitometry standard, a new, 100
Acceptance testing of diagnostic x-ray equipment, a systems approach to, 158
Accumulation, densitometric evaluation of myocardial contrast, 349
Acquisition, procedures equipment, 167
Acquisition system for extraction of subvisual information in diagnostic medical imaging, a digital video, 208
Activities of the American Association of Physicists in Medicine and the American Institute of Ultrasound in Medicine in ultrasound instrument performance evaluation, 253
Agencies and users of x-ray equipment, interface between regulatory, 329
Agencies and users of x-ray equipment, interface between regulatory, 330
Agencies and users of x-ray equipment from the point of view of the radiologist, interface between regulatory, 342
Aid, a diazotype radiographic duplicating system with application as a diagnostic, 232
(An) alternative to vendor-supplied service, 142
American Association of Physicists in Medicine and the American Institute of Ultrasound in Medicine in ultrasound instrument performance evaluation, activities of the, 253
American Institute of Ultrasound in Medicine in ultrasound instrument performance evaluation, activities of the American Association of Physicists in Medicine and the, 253
(An) analysis of film/screen combinations and patient exposures from nationwide evaluation of x-ray trends (NEXT), 136
Analysis of a quality control program, economic, 271
Angiographic information of high predictor valve in diagnosis, correlation of measured system MTF's with visualization of, 50
Angiography, visual perception limits in, 51
Anomalies, image quality in computerized and conventional tomography in the assessment of craniofacial, 353
Application as a diagnostic aid, a diazotype radiographic duplicating system with, 232
Approach to acceptance testing of diagnostic x-ray equipment, a systems, 158
Approach to the measurement and characterization of radiographic observer performance, a free response, 124
Approach to an optical transform method for differentiation of pathologies found in human blood cell smears, a preliminary study for an empirical, 195

Assessment of craniofacial anomalies, image quality in computerized and conventional tomography in the, 353
Assessment of imaging parameters and clinical relevance for magnification skeletal radiography, critical, 6
Assurance programs in diagnostic radiology facilities, a proposed recommendation for quality, 266
Attenuator thickness in kVp variable automatic brightness stabilization fluoroscopy, variation of x-ray tube potential as a function of, 152
Automatic brightness stabilization fluoroscopy, variation of x-ray tube potential as a function of attenuator thickness in kVp variable, 152

Beam filtration for mammography, x-ray, 204
Blood cell smears, a preliminary study for an empirical approach to an optical transform method for differentiation of pathologies found in human, 195
Blur of intensifying screens, equivalent, 106
Body scanners, comparison of translate-rotate and pure rotary computed tomography (CT), 280
Brightness stabilization fluoroscopy, variation of x-ray tube potential as a function of attenuator thickness in kVp variable automatic, 152

(CT) body scanners, comparison of translate-rotate and pure rotary computed tomography, 280
Calcium tungsten intensifying screens, information content and contrast of rare-earth and, 120
Can diagnostic examinations be effectively modeled?, 36
Cell smears, a preliminary study for an empirical approach to an optical transform method for differentiation of pathologies found in human blood, 195
Characteristics, x-ray image intensifier video system for diagnostic radiology: part 1, design, 216
Characterization of radiographic observer performance, a free response approach to the measurement and, 124
Checks of pulse-echo equipment, need for ultrasonic tissue equivalent test objects for routine performance, 263
Classification with in-house radiological engineering: the radiologic electronic specialist, developing a new job, 172
Clinical evaluations of mammographic screen-film systems, comparison of laboratory and, 30
Clinical interface in image evaluation, the laboratory/, 2
Clinical relevance for magnification skeletal radiography, critical assessment of imaging parameters and, 6
Combinations and patient exposures from nationwide evaluation of x-ray trends (NEXT), an analysis of film/screen, 136
Comparative densitometry, a method of processor control utilizing refrigerated pre-exposed control strips and visual, 276
Comparison of laboratory and clinical evaluations of mammographic screen-film systems, 30
(A) comparison of the number of rays vs the number of views in reconstruction tomography, 313
Comparison of quality of radiologic images from different screen/film combinations based on radiologist's subjective judgments, a methodology for, 24
Comparison of translate-rotate and pure rotary computed tomography (CT) body scanners, 280
Computed tomographic reconstruction noise, detectability in the presence of, 304
Computed tomography (CT) body scanners, comparison of translate-rotate and pure rotary, 280
Computed tomography (CT), radiation dosimetry in, 286
Computed tomography (CT) scanner resolution, geometrical limitations of, 296
Computed tomography (CT) scanners, image noise and smoothing in, 43
Computerized and conventional tomography in the assessment of craniofacial anomalies, image quality in, 353
Computerized tomography, sensitometry in, 87
Content and contrast of rare-earth and calcium tungsten intensifying screens, information, 120
Contrast accumulation, densitometric evaluation of myocardial, 349
Contrast of rare-earth and calcium tungsten intensifying screens, information content and, 120
Contrast and required photon count densities for medical images, the D-log E curve and its relationship to lesion, 95
Control, problems in routine ultrasound quality, 328
Control program, economic analysis of a quality, 271
Control strips and visual comparative densitometry, a method of processor control utilizing refrigerated pre-exposed, 276
Control utilizing refrigerated pre-exposed control strips and visual comparative densitometry, a method of processor, 276
Controllable parameters of nuclear medicine images, 60
Conventional tomography in the assessment of craniofacial anomalies, image quality in computerized and, 353
Correlation of measured system MTF's with visualization of angiographic information of high predictor valve in diagnosis, 50
Cost-effectiveness considerations in the evaluation of a new technology, 68
Count densities for medical images, the D-log E curve and its relationship to lesion contrast and required photon, 95
Craniofacial anomalies, image quality in computerized and conventional tomography in the assessment of, 353
Critical assessment of imaging parameters and clinical relevance for magnification skeletal radiography, 6
Current, the effect of electron evaporation on x-ray tube, 175

(The) D-log E curve and its relationship to lesion contrast and required photon count densities for medical images, 95
Data processing of dual-energy scans, 321
Decision making and physical image properties, radiologic, 39
Densities for medical images, the D-log E curve and its relationship to lesion contrast and required photon count, 95
Densitometric evaluation of myocardial contrast accumulation, 349
Densitometry, a method of processor control utilizing refrigerated pre-exposed control strips and visual comparative, 276
Design characteristics, x-ray image intensifier video system for diagnostic radiology: part 1, 216
Detectability in the presence of computed tomographic reconstruction noise, 304
Developing a new job classification with in-house radiological engineering: the radiologic electronic specialist, 172
Diagnostic aid, a diazotype radiographic duplicating system with application as a, 232
Diagnostic examinations be effectively modeled?, can, 36
Diagnostic medical imaging, a digital video acquisition system for extraction of subvisual information in, 208
Diagnostic radiology facilities, a proposed recommendation for quality assurance programs in, 266
Diagnostic radiology: part 1, design characteristics, x-ray image intensifier video system for, 216
Diagnostic ultrasound instrumentation, methods and results of dynamic range testing of, 245
Diagnostic x-ray equipment, a systems approach to acceptance testing of, 158
(A) diazotype radiographic duplicating system with application as a diagnostic aid, 232
Differentiation of pathologies found in human blood cell smears, a preliminary study for an empirical approach to an optical transform method for, 195
(A) digital video acquisition system for extraction of subvisual information in diagnostic medical imaging, 208
Dosimetry in computed tomography (CT), radiation, 286
Dual-energy scans, data processing of, 321
Duplicating system with application as a diagnostic aid, a diazotype radiographic, 232
Dynamic range testing of diagnostic ultrasound instrumentation, methods and results of, 245

E curve and its relationship to lesion contrast and required photon count densities for medical images, the D-log, 95
Echo transducer standardization, pulse-, 260
Economic analysis of a quality control program, 271
(Th·) effect of electron evaporation on x-ray tube current, 175
Efficiency of fluorescent x-ray intensifying screens, a status report. A standard method for determining the, 110
Electron evaporation on x-ray tube current, the effect of, 175
Electronic specialist, developing a new job classification with in-house radiological engineering: the radiologic, 172

Empirical approach to an optical transform method for differentiation of pathologies found in human blood cell smears, a preliminary study for an, 195
Engineering: the radiologic electronic specialist, developing a new job classification with in-house radiological, 172
Equipment acquisition procedures, 167
Equipment, interface between regulatory agencies and users of x-ray, 329
Equipment, interface between regulatory agencies and users of x-ray, 330
Equipment, need for ultrasonic tissue equivalent test objects for routine performance checks of pulse-echo, 263
Equipment from the point of view of the radiologist, interface between regulatory agencies and users of x-ray, 342
Equipment, a systems approach to acceptance testing of diagnostic x-ray, 158
Equivalent blur of intensifying screens, 106
Equivalent test objects for routine performance check of pulse-echo equipment, need for ultrasonic tissue, 263
Evaluation, activities of the American Association of Physicists in Medicine and the American Institute of Ultrasound in Medicine in ultrasound instrument performance, 253
Evaluation correlated with system measures: part 2, psychophysical, 226
Evaluation of the falling load technique, performance, 145
Evaluation of gallbladder images by use of the radiographic magnification technique, 17
Evaluation, the laboratory/clinical interface in image, 2
Evaluation of myocardial contrast accumulation, densitometric, 349
Evaluation of a new technology, cost-effectiveness considerations in the, 68
Evaluation of x-ray trends (NEXT), an analysis of film/screen combinations and patient exposures from nationwide, 136
Evaluations of mammographic screen-film systems, comparison of laboratory and clinical, 30
Evaporation on x-ray tube current, the effect of electron, 175
Examinations be effectively modeled?, can diagnostic, 36
Exposures from nationwide evaluation of x-ray trends (NEXT), an analysis of film/screen combinations and patient, 136
Extraction of subvisual information in diagnostic medical imaging, a digital video acquisition system for, 208

Facilities, a proposed recommendation for quality assurance programs in diagnostic radiology, 266
Failure in green sensitive x-ray films, reciprocity law, 114
Falling load technique, performance evaluation of the, 145
Film combinations based on radiologist's subjective judgments, a methodology for comparison of quality of radiologic images from different screen/, 24
Film/screen combinations and patient exposures from nationwide evaluation of x-ray trends (NEXT), an analysis of, 136
Film systems, an in-depth study of fluoroscopic spot, 180
Films, reciprocity law failure in green sensitive x-ray, 114
Filtration for mammography, x-ray beam, 204
Fluorescent x-ray intensifying screens, status report. A standard method for determining the efficiency of, 110
Fluoroscopic spot film systems, an in-depth study of, 180
Fluoroscopy, variation of x-ray tube potential as a function of attenuator thickness in kVp variable automatic brightness stabilization, 152
(A) free response approach to the measurement and characterization of radiographic observer performance, 124

Gallbladder images by use of the radiographic magnification technique, evaluation of, 17
Geometrical limitations of computed tomography (CT) scanner resolution, 296
Green sensitive x-ray films, reciprocity law failure in, 114

High predictor valve in diagnosis, correlation of measured system MTF's with visualization of angiographic information of, 50
Human blood cell smears, a preliminary study for an empirical approach to an optical transform method for differentiation of pathologies found in, 195

Image evaluation, the laboratory/clinical interface in, 2
Image intensifier tube, a novel proximity x-ray, 188
Image intensifier video system for diagnostic radiology: part 1, design characteristics, x-ray, 216
Image noise and smoothing in computed tomography (CT) scanners, 43
Image properties, radiologic decision making and physical, 39
Image quality in computerized and conventional tomography in the assessment of craniofacial anomalies, 353
Image quality, an overview of some measures of, 4
Images, controllable parameters of nuclear medicine, 60
Images, the D-log E curve and its relationship to lesion contrast and required photon count densities for medical, 95
Images from different screen/film combinations based on radiologist's subjective judgments, a methodology for comparison of quality of radiologic, 24
Images by use of the radiographic magnification technique, evaluation of gallbladder, 17
Imaging, a digital video acquisition system for extraction of subvisual information in diagnostic medical, 208
Imaging parameters and clinical relevance for magnification skeletal radiography, critical assessment of, 6
Imaging, sensitometry in medical, 76
(An) in-depth study of fluoroscopic spot film systems, 180
Information content and contrast of rare-earth and calcium tungsten intensifying screens, 120
Information in diagnostic medical imaging, a digital video acquisition system for extraction of subvisual, 208
Information of high predictor valve in diagnosis, correlation of measured system MTF's with visualization of angiographic, 50
In-house radiological engineering: the radiologic electronic specialist, developing a new job classification with, 172
Instrument performance evaluation, activities of the American Association of Physicists in Medicine and the American Institute of Ultrasound in Medicine in ultrasound, 253
Instrumentation, methods and results of dynamic range testing of diagnostic ultrasound, 245
Instrumentation, the physician's need for standardization of ultrasonic, 240
Intensifier tube, a novel proximity x-ray image, 188
Intensifier video system for diagnostic radiology: part 1, design characteristics, x-ray image, 216
Intensifying screens, equivalent blur of, 106
Intensifying screens, information content and contrast of rare-earth and calcium tungsten, 120
Intensifying screens, status report. A standard method for determining the efficiency of fluorescent x-ray, 110
Interface in image evaluation, the laboratory/clinical, 2
Interface between regulatory agencies and users of x-ray equipment, 329
Interface between regulatory agencies and users of x-ray equipment, 330
Interface between regulatory agencies and users of x-ray equipment from the point of view of the radiologist, 342

Job classification with in-house radiological engineering: the radiologic electronic specialist, developing a new, 172
Judgments, a methodology for comparison of quality of radiologic images from different screen/film combinations based on radiologist's subjective, 24

kVp variable automatic brightness stabilization fluoroscopy, variation of x-ray tube potential as a function of attenuator thickness in, 152

Laboratory and clinical evaluations of mammographic screen-film systems, comparison of, 30

Performance evaluation of the falling load technique, 145
Performance, a free response approach to the measurement and characterization of radiographic observer, 124
Photon count densities for medical images, the D-log E curve and its relationship to lesion contrast and required, 95
Physical image properties, radiologic decision making and, 39
(The) physician's need for standardization of ultrasonic instrumentation, 240
(The) physicist's viewpoint, 335
Potential as a function of attenuator thickness in kVp variable automatic brightness stabilization fluoroscopy, variation of x-ray tube, 152
Predictor valve in diagnosis, correlation of measured system MTF's with visualization of angiographic information of high, 50
Pre-exposed control strips and visual comparative densitometry, a method of processor control utilizing refrigerated, 276
(A) preliminary study for an empirical approach to an optical transform method for differentiation of pathologies found in human blood cell smears, 195
Problems in routine ultrasound quality control, 328
Procedures, equipment acquisition, 167
Processing of dual-energy scans, data, 321
Processing sensitometry standard, a new ANSI screen-film-, 100
Processor control utilizing refrigerated pre-exposed control strips and visual comparative densitometry, a method of, 276
Programs in diagnostic radiology facilities, a proposed recommendation for quality assurance, 266
Properties, radiologic decision making and physical image, 39
(A) proposed recommendation for quality assurance programs in diagnostic radiology facilities, 266
Proximity x-ray image intensifier tube, a novel, 188
Psychophysical evaluation correlated with system measures: part 2, 226
Pulse-echo equipment, need for ultrasonic tissue equivalent test objects for routine performance checks of, 263
Pulse-echo transducer standardization, 260
Pure rotary computed tomography (CT) body scanners, comparison of translate-rotate and, 280

Quality assurance programs in diagnostic radiology facilities, a proposed recommendation for, 266
Quality in computerized and conventional tomography in the assessment of craniofacial anomalies, image, 353
Quality control, problems in routine ultrasound, 328
Quality control program, economic analysis of a, 271
Quality, an overview of some measures of image, 4
Quality of radiologic images from different screen/film combinations based on radiologist's subjective judgments, a methodology for comparison of, 24

Radiation dosimetry in computed tomography (CT), 286
Radiographic duplicating system with application as a diagnostic aid, a diazotype, 232
Radiographic magnification technique, evaluation of gallbladder images by use of the, 17
Radiographic observer performance, a free response approach to the measurement and characterization of, 124
Radiography, critical assessment of imaging parameters and clinical relevance for magnification skeletal, 6
Radiography: review and comparison with 120 KVP, 350 KVP chest, 348
Radiologic decision making and physical image properties, 39
Radiologic electronic specialist, developing a new job classification with in-house radiological engineering: the, 172
Radiologic images from different screen/film combinations based on radiologist's subjective judgments, a methodology for comparison of quality of, 24
Radiological engineering: the radiologic electronic specialist, developing a new job classification with in-house, 172
Radiologist, interface between regulatory agencies and users of x-ray equipment from the point of view of the, 342
Radiologist's subjective judgments, a methodology for comparison of quality of radiologic images from different screen/film combinations based on, 24
Radiology facilities, a proposed recommendation for quality assurance programs in diagnostic, 266

Radiology: part 1, design characteristics, x-ray image video system for diagnostic, 216
Range testing of diagnostic ultrasound instrumentation, methods and results of dynamic, 245
Rare-earth and calcium tungsten intensifying screens, information content and contrast of, 120
Rays vs the number of views in reconstruction tomography, a comparison of the number of, 313
Reciprocity law failure in green sensitive x-ray films, 114
Recommendation for quality assurance programs in diagnostic radiology facilities, a proposed, 266
Reconstruction noise, detectability in the presence of computed tomographic, 304
Reconstruction tomography, a comparison of the number of rays vs the number of views in, 313
Refrigerated pre-exposed control strips and visual comparative densitometry, a method of processor control utilizing, 276
Regulatory agencies and users of x-ray equipment, interface between, 329
Regulatory agencies and users of x-ray equipment, interface between, 330
Regulatory agencies and users of x-ray equipment from the point of view of the radiologist, interface between, 342
Relevance for magnification skeletal radiography, critical assessment of imaging parameters and clinical, 6
Required photon count densities for medical images, the D-log E curve and its relationship to lesion contrast and, 95
Resolution, geometrical limitations of computed tomography (CT) scanner, 296
Response approach to the measurement and characterization of radiographic observer performance, a free, 124
Results of dynamic range testing of diagnostic ultrasound instrumentation, methods and 245
Rotary computed tomography (CT) body scanners, comparison of translate-rotate and pure, 280
Rotate and pure rotary computed tomography (CT) body scanners, comparison of translate-, 280
Routine performance checks of pulse-echo equipment, need for ultrasonic tissue equivalent test objects for, 263
Routine ultrasound quality control, problems in, 328

Scanner resolution, geometrical limitations of computed tomography, (CT), 296
Scanners, comparison of translate-rotate and pure rotary computed tomography (CT) body, 280
Scanners, image noise and smoothing in computed tomography (CT), 43
Scans, data processing of dual-energy, 321
Screen/film combinations based on radiologist's subjective judgments, a methodology for comparison of quality of radiologic images from different, 24
Screen-film-processing sensitometry standard, a new ANSI, 100
Screen-film systems, comparison of laboratory and clinical evaluations of mammographic, 30
Screens, equivalent blur of intensifying, 106
Screens, information content and contrast of rare-earth and calcium tungsten intensifying, 120
Screens, status report. A standard method for determining the efficiency of fluorescent x-ray intensifying, 110
Sensitive x-ray films, reciprocity law failure in green, 114
Sensitometry in computerized tomography, 87
Sensitometry in medical imaging, 76
Sensitometry standard, a new ANSI screen-film-processing, 100
Service, an alternative to vendor-supplied, 142
Skeletal radiography, critical assessment of imaging parameters and clinical relevance for magnification, 6
Smears, a preliminary study for an empirical approach to an optical transform method for differentiation of pathologies found in human blood cell, 195
Smoothing in computed tomography (CT) scanners, image noise and, 43
Specialist, developing a new job classification with in-house radiological engineering: the radiologic electronic, 172
Spot film systems, an in-depth study of fluoroscopic, 180
Stabilization fluoroscopy, variation of x-ray tube potential as a function of attenuator thickness in kVp variable automatic brightness, 152
Standard method for determining the efficiency of fluorescent x-ray intensifying screens, status report. A, 110
Standard, a new ANSI screen-film-processing sensitometry, 100
Standardization, pulse-echo transducer, 260
Standardization of ultrasonic instrumentation, the physician's need for, 240
Status report. A standard method for determining the efficiency of fluorescent x-ray intensifying screens, 110
Strips and visual comparative densitometry, a method of processor control utilizing refrigerated pre-exposed control, 276
Study for an empirical approach to an optical transform method for differentiation of pathologies found in human blood cell smears, a preliminary, 195
Subvisual information in diagnostic medical imaging, a digital video acquisition system for extraction of, 208
System with application as a diagnostic aid, a diazotype radiographic duplicating, 232
System for diagnostic radiology: part 1, design characteristics, x-ray image intensifier video, 216
System MTF's with visualization of angiographic information of high predictor valve in diagnosis, correlation of measured, 50
System measures: part 2, psychophysical evaluation correlated with, 226
(A) systems approach to acceptance testing of diagnostic x-ray equipment, 158
Systems, comparison of laboratory and clinical evaluations of mammographic screen-film, 30
Systems, an in-depth study of fluoroscopic spot film, 180

350 KVP chest radiography: review and comparison with 120 KVP, 348
Technique, evaluation of gallbladder images by use of the radiographic magnification, 17
Technique, performance evaluation of the falling load, 145
Technology, cost-effectiveness considerations in the evaluation of a new, 68
Test objects for routine performance checks of pulse-echo equipment, need for ultrasonic tissue equivalent, 263
Testing of diagnostic ultrasound instrumentation, methods and results of dynamic range, 245
Testing of diagnostic x-ray equipment, a systems approach to acceptance, 158
Thickness in kVp variable automatic brightness stabilization fluoroscopy, variation of x-ray tube potential as a function of attenuator, 152
Tissue equivalent test objects for routine performance checks of pulse-echo equipment, need for ultrasonic, 263
Tomographic reconstruction noise, detectability in the presence of computed, 304
Tomography (CT) body scanners, comparison of translate-rotate and pure rotary computed, 280
Tomography (CT), radiation dosimetry in computed, 286
Tomography (CT) scanner resolution, geometrical limitations of computed, 296
Tomography (CT) scanners, image noise and smoothing in computed, 43
Tomography in the assessment of craniofacial anomalies, image quality in computerized and conventional, 353
Tomography, a comparison of the number of rays vs the number of views in reconstruction, 313
Tomography, sensitometry in computerized, 87
Transducer standardization, pulse-echo, 260
Transform method for differentiation of pathologies found in human blood cell smears, a preliminary study for an empirical approach to an optical, 195
Translate-rotate and pure rotary computed tomography (CT) body scanners, comparison of, 280
Trends (NEXT), an analysis of film/screen combinations and patient exposures from nationwide evaluation of x-ray, 136
Tube current, the effect of electron evaporation on x-ray, 175
Tube, a novel proximity x-ray image intensifier, 188
Tube potential as a function of attenuator thickness in kVp variable automatic brightness stabilization fluoroscopy, variation of x-ray, 152
Tungsten intensifying screens, information content and contrast of rare-earth and calcium, 120

Ultrasonic instrumentation, the physician's need for standardization of, 240
Ultrasonic tissue equivalent test objects for routine performance checks of pulse-echo equipment, need for, 263

Ultrasound instrument performance evaluation, activities of the American Association of Physicists in Medicine and the American Institute of Ultrasound in Medicine in, 253
Ultrasound instrumentation, methods and results of dynamic range testing of diagnostic, 245
Ultrasound quality control, problems in routine, 328
Users of x-ray equipment, interface between regulatory agencies and, 329
Users of x-ray equipment, interface between regulatory agencies and, 330
Users of x-ray equipment from the point of view of the radiologist, interface between regulatory agencies and, 342

Valve in diagnosis, correlation of measured system MTF's with visualization of angiographic information of high predictor, 50
Variable automatic brightness stabilization fluoroscopy, variation of x-ray tube potential as a function of attenuator thickness in kVp, 152
Variation of x-ray tube potential as a function of attenuator thickness in kVp variable automatic brightness stabilization fluoroscopy, 152
Vendor-supplied service, an alternative to, 142
Video acquisition system for extraction of subvisual information in diagnostic medical imaging, a digital, 208
Video system for diagnostic radiology: part 1, design characteristics, x-ray image intensifier, 216
Views in reconstruction tomography, a comparison of the number of rays vs the number of, 313
Visual comparative densitometry, a method of processor control utilizing refrigerated pre-exposed control strips and, 276
Visual perception limits in angiography, 51
Visualization of angiographic information of high predictor valve in diagnosis, correlation of measured system MTF's with, 50

X-ray beam filtration for mammography, 204
X-ray equipment, interface between regulatory agencies and users of, 329
X-ray equipment, interface between regulatory agencies and users of, 330
X-ray equipment from the point of view of the radiologist, interface between regulatory agencies and users of, 342
X-ray equipment, a systems approach to acceptance testing of diagnostic, 158
X-ray films, reciprocity law failure in green sensitive, 114
X-ray image intensifier tube, a novel proximity, 188
X-ray image intensifier video system for diagnostic radiology: part 1, design characteristics, 216
X-ray intensifying screens, status report. A standard method for determining the efficiency of fluorescent, 110
X-ray trends (NEXT), an analysis of film/screen combinations and patient exposures from nationwide evaluation of, 136
X-ray tube current, the effect of electron evaporation on, 175
X-ray tube potential as a function of attenuator thickness in kVp variable automatic brightness stabilization fluoroscopy, variation of, 152
